## Abstracts

The global Powder Fluidity Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The powder fluidity tester can directly test the parameters including the tap density of the powder, the bulk (packing) density, the angle of repose (angle of repose), the collapse angle, the flat plate angle, the degree of dispersion, the Hall flow rate and other parameters, and pass the above tests. The calculation of the data can obtain indicators such as difference angle, compression degree, porosity, homogeneity, cohesion degree, etc., and can also obtain Carr index parameters such as fluidity index and jet flow index through the table lookup of the above parameters.
