Abstracts

The global Powder Metallurgy Gears market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Powder metallurgy gears are powder metallurgy parts commonly used in various automobile engines. Through one-time forming and finishing process, no other post-processing process is required, and the dimensional accuracy requirements, especially the tooth profile accuracy, can be fully met. Therefore, compared with the traditional mechanical processing method, the material input and manufacturing are greatly reduced, and it is a typical product that reflects the characteristics of powder metallurgy. The proportion of powder metallurgy gears in various machinery, automobiles and motorcycles is far greater than that of powder metallurgy parts in other fields.

This report studies the global Powder Metallurgy Gears production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Powder Metallurgy Gears, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
