According to our (Global Info Research) latest study, the global Powder Metallurgy Press Forming Gear market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Powder metallurgy press forming gear are powder metallurgy parts commonly used in various automobile engines. Through one-time forming and finishing process, no other post-processing process is required, and the dimensional accuracy requirements, especially the tooth profile accuracy, can be fully met. Therefore, compared with the traditional mechanical processing method, the material input and manufacturing are greatly reduced, and it is a typical product that reflects the characteristics of powder metallurgy. The proportion of powder metallurgy gears in various machinery, automobiles and motorcycles is far greater than that of powder metallurgy parts in other fields.
