According to our (Global Info Research) latest study, the global Powder Metallurgy Soft-Magnetic Alloys market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Soft magnetic alloy powder metallurgy is used primarily for their magnetic response characteristics in DC magnetic fields. Post-sinter annealing normally is not required for the soft-magnetic alloys. Soft magnetic alloys are materials that can be easily magnetized, - thus exhibiting high permeability -high permeability allows the design of smaller, more efficient components, and just as easily demagnetized. Soft magnetic materials possess high flux density and permeability. Using iron with various alloying elements makes customized magnetic performance possible.
