According to our (Global Info Research) latest study, the global Powder Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Powder Pumps are used to transport powders by mixing them with air, making them behave as a fluid.

Basically, a diaphragm pump is used to convey by changing the volume in a container by pulling a membrane called a diaphragm with a piston. Some products are devised to reduce dust generation by reducing the amount of air used and by transporting products at a constant flow rate with little pulsation. In addition to diaphragm pumps, there are also products that are transported using blowers and vacuum pumps.
