Powdered alcohol is alcohol that has undergone microencapsulation; turning it from a liquid into a solid (powder form). The process of microencapsulation involves coating drops of alcohol with a membrane to make them a powdered variant. The taste of this form of alcohol is somewhat off putting and some argue it has much less value than regular liquid alcohol. Food manufacturers use it as a preservative to extend the shelf life of other products. Sometimes it is used as an additive in cocktails, combined with alcohol and water.
