According to our (Global Info Research) latest study, the global Power Amplifiers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Power amplifier for short, commonly known as ' amplifiers ', is the most basic equipment in the sound system, its role is mainly to input the weak signal of the audio source equipment to amplify, generate enough current to push the loudspeaker for sound playback. Due to the consideration of power, impedance, distortion, dynamics, and different range of use and control functions, different amplifiers have different internal signal processing, circuit design and production process.

Power amplifiers without auxiliary functions such as source selection and volume control are called rear stage. The preamplifier is the pre-amplifier and control section before the power amplifier, which is used to enhance the voltage amplitude of the signal, provide input signal selection, tone adjustment and volume control. A preamplifier is also called a preamplifier. The amplifier that installs two parts of the preamplifier and the power amplifier in the same case is called the combined amplifier.

In China, Power Amplifiers key players include Yamaha, Shinco, Pioneer, SAST, etc. Global top four manufacturers hold a share over 20%.
