The global Power Battery Cells Contact System (CCS) market size is expected to reach \$ 10328 million by 2032, rising at a market growth of 14.2% CAGR during the forecast period (2026-2032).

A Power Battery Cells Contact System (CCS) is a modular component used in battery modules for electric vehicles (EVs) and other power systems. It serves for series and parallel connection of battery cells, voltage/temperature sampling signal acquisition, and interfacing with the Battery Management System (BMS). The core functions of a CCS are to ensure efficient current conduction, safety, and data communication within the battery. In 2025, the global production capacity of Power Battery Cells Contact Systems (CCS) is projected to reach 190 million units, with an average price of approximately US\$20.8 per unit and a gross profit margin of approximately 26.86%. Kosen Technology has an annual CCS busbar production capacity of 3 million units, while Huichuangda has an annual CCS module production capacity of 12 million units. The upstream industry includes FPC/PCB manufacturers, copper and aluminum busbar manufacturers, plastic structural component manufacturers, and equipment manufacturers; Widely used in electric vehicles (EVs), commercial electric vehicles, electric motorcycles, power tools, and other fields.

Accelerated Electrification: Global EV sales continue to grow, projected to exceed 20 million units by 2025, driving increased demand for power batteries.

Policy Support: Government support policies for electric vehicles (such as purchase subsidies and environmental regulations) further boost the demand for power batteries.

Battery Technology Advancements: The energy density, power output, and charging

speed of power batteries are continuously improving, leading to increasing demand and technical requirements for CCS (Computer-Supported Cells).
