## Abstracts

The global Power Factor Correction Devices market size is expected to reach \$ 11180 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Power-factor correction increases the power factor of a load, improving efficiency for the distribution system to which it is attached. Linear loads with low power factor (such as induction motors) can be corrected with a passive network of capacitors or inductors. Non-linear loads, such as rectifiers, distort the current drawn from the system. In such cases, active or passive power factor correction may be used to counteract the distortion and raise the power factor. The devices for correction of the power factor may be at a central substation, spread out over a distribution system, or built into power-consuming equipment.

Global Power Factor Correction Devices main players are ABB, Schneider, Siemens, Eaton, etc. Global top four manufacturers hold a share nearly 40%. Asia-Pacific is the largest market, with a share above 50%.

With the global emphasis on energy conservation, emission reduction and sustainable development, governments of various countries have introduced strict energy efficiency standards and energy-saving policies. These policies have driven the demand for high-efficiency equipment. Many countries and regions have implemented mandatory energy efficiency standards, such as the EU's ErP directive and the US's ENERGY STAR certification. These regulations require that electrical equipment must meet a certain power factor, otherwise they will face fines or sales bans. In developed countries, the existing old power systems need to be gradually replaced with more efficient and reliable PFC devices to meet new energy efficiency standards and user needs. As

investment in power infrastructure continues to increase in developing countries and regions, the demand for PFC devices has also increased. Especially in Asia, Africa and Latin America, power system upgrades and expansions provide huge market opportunities for PFC devices.
