According to our (Global Info Research) latest study, the global Power Generation Gas Turbine(Below 40MW) market size was valued at US\$ 1700 million in 2025 and is forecast to a readjusted size of US\$ 1975 million by 2032 with a CAGR of 2.1% during review period.

A Power Generation Gas Turbine below 40 MW refers to a small-scale gas turbine system designed to generate electricity with an output of less than 40 megawatts. These turbines are compact, versatile, and capable of operating on a variety of fuels, including natural gas, diesel, and biofuels. Their small size and flexibility make them suitable for locations with limited grid access, industrial plants, and distributed energy systems where rapid deployment and adaptability are essential.

Such turbines can operate in simple cycle mode for quick start-up and peak power applications or in combined heat and power (CHP) mode to simultaneously produce electricity and useful thermal energy. This dual functionality enhances overall energy efficiency and makes them attractive for industrial and commercial facilities that require both electrical and thermal energy. They are also employed in microgrids, remote communities, and emergency backup power systems due to their reliability and fast response capabilities.

In 2025, global Power Generation Gas Turbine (Below 40 MW) production reached approximately 2,868 MW, with an average market price of around 576 USD/KW.
