Abstracts

According to our (Global Info Research) latest study, the global Power Lift Recliners market size was valued at US\$ 3910 million in 2025 and is forecast to a readjusted size of US\$ 6227 million by 2032 with a CAGR of 6.8% during review period.

In 2025, global sales of Power Lift Recliners reached approximately 2,850 K Units, with an average selling price of about US\$1,333 per unit. Power Lift Recliners are single-seat motorized recliner chairs equipped with electric motors, linear actuators, lift hinges, or integrated seat-lift mechanisms to support seat rising, forward tilting, backrest adjustment, and leg-rest positioning. These products are designed around powered lift assistance and powered reclining functions, mainly serving elderly users, people with reduced mobility, post-surgery recovery users, and home-care settings by helping users transition more easily between sitting, standing, reclining, and resting positions.

Power Lift Recliners sit at the intersection of the silver economy, aging-friendly home furniture, and assistive mobility products. Compared with standard power recliners, their core value lies not only in comfort, but also in helping elderly users, mobility-impaired individuals, and post-surgery recovery users move between sitting, standing, reclining, and resting positions. This gives the category a clear functional demand base rather than a purely discretionary furniture upgrade. As global aging accelerates and home-based care becomes more important, demand is expected to expand from mature markets in North America and Europe to China, Japan, India, and other regions with growing elderly-care needs.

The market has already reached meaningful commercial scale. Global sales of Power Lift Recliners are estimated at approximately 2,850 K Units in 2025, with a market size

of about USD 3,800 million. The market is expected to reach around USD 4,070 million in 2026, with a projected CAGR of about 7.0% from 2026 to 2032. Growth will be driven by rising demand for safer home living among elderly users, continued adoption by senior-care and rehabilitation institutions, and product upgrades from basic single-motor models to dual-motor, three-or-more-motor, zero-gravity, heated, massage-enabled, and easier-to-clean configurations.

From a competitive perspective, North America and Europe are led by established branded manufacturers such as Pride Mobility, Golden Technologies, La-Z-Boy, HSL, and Repose Furniture, while Chinese players are mainly represented by aging-friendly furniture providers and export-oriented OEM/ODM manufacturers. In the near term, Western brands are expected to retain advantages in channel access, product positioning, and consumer awareness. Over the longer term, Chinese manufacturers may gain share through mature upholstered-furniture supply chains, functional hardware integration, cost competitiveness, and domestic aging-friendly renovation policies. For market sizing and company screening, a narrow scope should be maintained, focusing on single-seat recliners with powered lift-assist functions.
