The global Power Line Choke For DC Motors EMC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Power Line Choke for DC Motors EMC is a type of electronic component used for electromagnetic compatibility (EMC) purposes in direct current (DC) motors. It is designed to reduce the high-frequency electromagnetic interference (EMI) generated by DC motors and other electrical devices, as well as to protect them from external EMI.

The power line choke is essentially an inductor, consisting of a coil of wire wound around a core material such as iron or ferrite. The choke is inserted in series with the DC motor power supply line, effectively creating a low-pass filter that attenuates high-frequency EMI. The choke can also be used in conjunction with capacitors and other filtering components to provide additional filtering of the power supply line.

Power line chokes for DC motors EMC are commonly used in automotive applications, as well as in other industries such as industrial automation, robotics, and consumer electronics.
