The global Power Lithium Battery market size is expected to reach \$ 538469 million by 2032, rising at a market growth of 16.4% CAGR during the forecast period (2026-2032).

Power lithium batteries refer to energy storage and supply systems used in vehicles such as pure electric vehicles, plug-in hybrid electric vehicles, range-extended electric vehicles, and electric commercial vehicles. They primarily provide electrical energy to the vehicle's drive motor, on-board high-voltage system, and some auxiliary systems. They enable energy storage, power output, regenerative braking, temperature control, and safety monitoring. Currently, electric vehicle batteries are mainly lithium-ion batteries, including lithium iron phosphate batteries and ternary lithium batteries. Some models also use lithium manganese oxide and lithium titanate technologies. Electric vehicle batteries directly affect the vehicle's range, charging speed, safety performance, lifespan, low-temperature performance, and vehicle cost, making them one of the most critical components of new energy vehicles. Global shipments are projected to reach 1495.1 GWh in 2025, with approximately 1,187 GWh installed in vehicles.

The global lithium-ion battery market is currently experiencing rapid growth, technological iteration, and supply chain restructuring. As the global automotive industry accelerates its transformation towards electrification, intelligentization, and decarbonization, electric vehicle sales continue to grow, driving a rapid expansion in battery installation demand. Power batteries have become one of the highest-value, most competitive, and strategically significant links in the new energy vehicle supply chain. Their cost, safety, range, fast-charging performance, and supply stability directly impact the product competitiveness and market share of vehicle manufacturers.

From the demand side, pure electric vehicles remain the main driver of growth in the

electric vehicle battery market, while plug-in hybrid electric vehicles and range-extended electric vehicles are also maintaining rapid development in some regions. The passenger vehicle market contributes the majority of installation demand, while the electrification of electric commercial vehicles, buses, logistics vehicles, heavy trucks, and special-purpose vehicles is creating new growth opportunities for high-safety, long-life, and high-cycle-capacity battery products. As consumers increasingly demand higher range, charging efficiency, low-temperature performance, and vehicle safety, vehicle manufacturers are placing higher demands on battery system performance, cost control, and supply chain coordination capabilities.

From a product structure perspective, lithium iron phosphate batteries and ternary lithium batteries remain the two mainstream technologies in the electric vehicle battery market. Lithium iron phosphate (LFP) batteries, with their advantages in cost, safety, and cycle life, continue to increase their market share in low-to-mid-range passenger vehicles, commercial vehicles, and high-performance models. Ternary lithium batteries, relying on their higher energy density, maintain an important position in applications requiring long driving range, high-end models, and those with significant lightweighting requirements. Square, cylindrical, and pouch battery technologies coexist, and advancements in technologies such as blade batteries, short-blade batteries, large cylindrical batteries, CTP, CTC, high-voltage fast charging, semi-solid-state, and solid-state batteries are ongoing. Industry competition is gradually shifting from competition based on production capacity to competition based on system efficiency, safety performance, and total lifecycle cost.

In terms of the industry chain, the electric vehicle battery market is highly correlated with key materials such as lithium, nickel, cobalt, manganese, iron, phosphorus, graphite, electrolyte, separator, copper foil, and aluminum foil. Fluctuations in raw material prices, resource security, and supply chain security have a significant impact on corporate profitability. Midstream cell, module, battery pack, BMS, and thermal management system companies are accelerating large-scale manufacturing and platform deployment, while downstream OEMs are strengthening supply chain control through long-term procurement agreements, joint ventures, self-developed batteries, and vertical integration. Battery recycling, secondary use, and closed-loop materials are becoming crucial directions for the industry to reduce costs, decrease carbon emissions, and enhance resource security.

From a regional market perspective, China possesses a complete industrial chain advantage in electric vehicle battery materials, cell manufacturing, equipment supply, and vehicle applications, making it the world's most important production and

consumption market. Europe and North America are accelerating the construction of local battery production capacity, promoting the improvement of their local new energy vehicle industrial chains. Japanese and South Korean companies, relying on their technological accumulation, quality management, and global customer support experience, continue to maintain strong competitiveness in the high-end market. India, Southeast Asia, Latin America, and the Middle East, with the initial development of the electric vehicle industry, will also become important growth areas for companies' future global expansion.

Looking ahead, the global electric vehicle battery market will maintain high growth potential, but industry competition will become more complex. Increased sales of new energy vehicles, improved fast-charging networks, upgraded vehicle platforms, and policy support will continue to drive demand expansion; at the same time, challenges will arise from temporary overcapacity, price competition, technology shifts, safety regulations, international trade policies, and fluctuations in raw material supply. Companies with large-scale manufacturing capabilities, technological iteration capabilities, global customer resources, cost control capabilities, and recycling system construction capabilities will be in a more advantageous position in future competition.
