Among them, TELD is the leader with about 21% market share. Asia-Pacific is the largest market, with a share about 84%, followed by North America and Europe, with the share about 9% and 7%. In terms of product type, 30KW and Below occupy the largest share of the total market, about 96%. And in terms of product Application, the largest application is Passenger Car, followed by Commercial Vehicle.

Power Module for EV Charger is the only core product with technical threshold in the entire charging pile industry.

As the core component of the charging pile, the Power Module belongs to a large category of power supply products. Its core function is to convert the AC power in the grid into DC power that can charge the battery. The charging module not only provides energy and power, but also controls and converts the circuit, which ensures the stability of the power supply circuit and is suitable for charging various types of power batteries. The performance of the Power Module not only directly affects the overall performance of the charging pile, but is also related to charging safety issues, and is the core of building a high-power charging infrastructure.

Power Module is mainly composed of: semiconductor power devices, integrated circuits, magnetic components, PCB, capacitors, chassis fans, etc. The key of the Power

Module is the MOS tube switch. When the charging module is working, the three-phase AC power supply is rectified and filtered, and then becomes a DC input voltage for the DC/DC conversion circuit. The controller acts on the power switch MOS tube through the drive circuit to convert the rectified and filtered DC voltage into an AC voltage, and the AC voltage at this time is pulse width modulated. Then, the AC voltage is transformed and isolated by the high-frequency transformer, rectified and filtered again to obtain a DC pulse, and then charged to the battery pack.

Enterprises with power module production capacity can be roughly divided into two categories: one is mainly engaged in the production and operation of charging piles, which are mainly used for self-production. One type is a Power Module supplier mainly supplying to charging pile production enterprises.
