Power over Ethernet (PoE) is a technology that allows Ethernet cables to carry both data and electrical power to remote devices, eliminating the need for separate power supplies. This is achieved by injecting electrical power into the Ethernet cable, enabling devices such as IP cameras, VoIP phones, wireless access points, and network switches to operate with just a single connection. PoE is widely used in various industries, offering flexibility, ease of installation, and cost savings by simplifying cabling infrastructure and reducing the need for additional power outlets or adapters.
