## Abstracts

According to our (Global Info Research) latest study, the global Power over Ethernet (PoE) Device market size was valued at US\$ 2804 million in 2025 and is forecast to a readjusted size of US\$ 3205 million by 2032 with a CAGR of 2.0% during review period.

Power over Ethernet (PoE) Devices refer to networking equipment that can transmit electrical power along with data over standard Ethernet cables. Based on IEEE standards such as IEEE 802.3af, IEEE 802.3at (PoE+), and IEEE 802.3bt (PoE++), PoE technology enables devices to receive both power and data through a single Ethernet connection, eliminating the need for separate power cables. The upstream of the PoE device industry mainly consists of semiconductor chips, Ethernet PHY chips, power management ICs, magnetic components, printed circuit boards (PCBs), and connectors. These components form the core hardware platform of PoE equipment. Key suppliers include semiconductor companies such as Texas Instruments, Analog Devices, Microchip Technology, Broadcom, and STMicroelectronics.

The Power over Ethernet (PoE) device market has been expanding rapidly due to the increasing deployment of IP surveillance systems, wireless networking infrastructure, and IoT devices. PoE technology allows both power and data to be delivered through a single Ethernet cable, significantly reducing installation costs and improving deployment flexibility. As a result, PoE devices are widely adopted in enterprise networking, smart cities, industrial automation, and intelligent building systems. With the adoption of the IEEE 802.3bt standard, higher-power PoE solutions are now capable of supporting advanced devices such as high-definition cameras, smart lighting systems, and edge computing equipment. Driven by the continuous expansion of IoT and digital infrastructure, the global PoE device market is expected to maintain steady growth in

the coming years.
