## Abstracts

According to our (Global Info Research) latest study, the global Power over Ethernet (PoE) Injectors market size was valued at US\$ 969 million in 2025 and is forecast to a readjusted size of US\$ 1766 million by 2032 with a CAGR of 8.8% during review period.

A Power over Ethernet (PoE) Injector (PoE Injector) is a networking power device that adds electrical power to an Ethernet cable so that both data and power can be transmitted simultaneously over the same cable. It is typically installed between a non-PoE Ethernet switch and a PoE-enabled device, acting as a midspan power sourcing equipment (PSE). The PoE injector draws power from an external power supply and injects DC voltage into the Ethernet line, allowing devices such as IP cameras, wireless access points, VoIP phones, and IoT devices to receive both data and power through a single cable. Most PoE injectors comply with IEEE standards such as 802.3af, 802.3at, and 802.3bt, supporting power delivery ranging from about 15.4 W to up to 90 W per port. In 2025, global PoE Injector production reached approximately 14239.6 k units. Upstream suppliers primarily provide key components such as PoE control chips, power modules, networking interfaces, PCBs, and casing materials. The performance of PoE injectors heavily relies on the quality and stability of power management and network connection components. Major suppliers in this segment include Texas Instruments (PoE control chips), Mean Well (power modules), and Amphenol (network interfaces).

As smart buildings, security surveillance, enterprise communications, and industrial IoT grow rapidly, PoE injectors have become widely adopted as an efficient power delivery solution globally. PoE injectors enable both data and power transmission over the same Ethernet cable, significantly simplifying the deployment of network devices while reducing wiring and installation costs. With the acceleration of urbanization, the demand

for smart city and smart building construction continues to grow. Particularly in applications such as security surveillance, intelligent lighting, and IoT, PoE technology has become the mainstream solution for efficient power delivery. PoE injectors enable multiple devices to be connected via a single network cable, making the installation process simpler and more efficient.
