Abstracts

The global Power Plants Air-Cooled Condenser market size is expected to reach \$ 611.7 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

Air-cooled condensers in power plants play a critical role in the efficient and sustainable operation of the facility. These condensers, by utilizing ambient air for cooling, help in the condensation of exhaust steam from the turbine, thereby converting it back into water for reuse in the power generation process. Their integration allows power plants to operate without relying on large quantities of water, making them particularly valuable in regions where water scarcity or environmental concerns are prevalent.
