Power quality is measured according to the quality with which it is delivered to the end customers; power quality is deemed as high when it has clean sinusoidal waveforms without any spikes, sags, and other electrical disturbances. It should also be free from transients, harmonics, and other such distortions. Over the years, with the advances in technologies and equipment, power quality has become a major issue for power providers and their customers.

Scope of the Report:

This report focuses on the Power Quality Meter in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa.
