According to our (Global Info Research) latest study, the global Power Skiving Unit market size was valued at US\$ 250 million in 2025 and is forecast to a readjusted size of US\$ 390 million by 2032 with a CAGR of 6.6% during review period.

Power skiving unit is a continuous cutting process that enables machining to be carried out in a single setup. The possibility to machine the complete component in a multi-task machine or machining centre in one single set-up shortens production time, improves quality and reduces handling and logistics costs.

The aerospace industry uses a large number of machines and equipment to perform its functions. Powerful skiving units are widely used in the aerospace market, which is driving the market significantly. The main applications of gear machine tools in the aerospace industry include aircraft engine assembly, landing gear assembly, and flight control system assembly. Apart from all these, power skiving units also help in manufacturing various other components such as steering systems and hydraulic actuators. This is one of the major factors driving the market growth. Power skiving units are an integral part of the general machinery industry and there is high demand for these machines in the automotive and general machinery industries, which expands the market base of the product and generates profits for the major industry players. Engine manufacturing, transmission assembly, engine construction, machine tool construction, material handling equipment, and pump and valve manufacturing are the main areas of use for these machines. These reasons together drive the growth of the market.
