According to our (Global Info Research) latest study, the global Power Supply market size was valued at US\$ 57340 million in 2025 and is forecast to a readjusted size of US\$ 85160 million by 2032 with a CAGR of 5.9% during review period.

A power supply is a device that provides electrical or electronic equipment with the required power. In most cases, the power generated by generators, batteries, and other devices is not sufficient for the electrical or electronic equipment they consume, requiring further conversion. A power supply's function is to convert primary energy, such as mains electricity or batteries, into secondary energy suitable for various electrical devices.

The power supply market is a vital component of the electronics and power industry, encompassing a wide range of products, including AC power supplies, DC power supplies, switching power supplies, UPS (uninterruptible power supplies), and new energy power modules. These products are widely used in consumer electronics, communications equipment, industrial automation, transportation, medical devices, and renewable energy power generation and storage systems. With the advancement of informatization and intelligentization, power supplies must not only meet basic power supply functions but also possess high efficiency, low energy consumption, miniaturization, and high reliability. Consequently, power supply products are gradually evolving from traditional linear power supplies to high-frequency, modular, and intelligent ones.

In terms of market demand, the global power supply market maintains steady growth. Consumer electronics and data centers are the core demand drivers. The widespread adoption of 5G communications, cloud computing, and artificial intelligence, in

particular, has driven the rapid development of high-efficiency power supplies and server power supplies. Furthermore, new energy industries, such as photovoltaic inverters, wind power converters, and electric vehicle onboard power supplies, are injecting new growth momentum into the market. With the advancement of the dual carbon goals, the penetration rate of high-efficiency and energy-saving power supplies continues to increase, and power efficiency standards are becoming stricter globally, further driving the advancement of power supply technology. From a competitive perspective, the international market is primarily dominated by companies such as Delta Electronics, Mean Well, Asus, XP Power, ABB, and Siemens, which have strong advantages in high-end power modules, data center power supplies, and industrial power supplies. Chinese manufacturers, on the other hand, have achieved rapid breakthroughs in consumer electronics power supplies, adapters, communications power supplies, and new energy applications, with representative companies such as BYD Electronics, Chint Power Supply, and Shenzhen Yingkerui emerging. Overall, market concentration is polarized: the high-end segment is dominated by international giants, while mid- and low-end products face fierce price competition.

Looking forward, the power supply market will benefit from the trend toward intelligence and greenness. On the one hand, features such as intelligent power management, digital power control, and remote monitoring will gradually become mainstream to meet the needs of the Internet of Things and smart manufacturing. On the other hand, high-efficiency, low-carbon, energy-saving power products will rapidly gain popularity, especially in emerging areas such as new energy vehicles, energy storage systems, and distributed energy, where the market potential is vast. The global power supply market is expected to maintain medium-to-high growth over the next five years, with China expected to capture a larger share of the new energy and intelligent power supply sectors.
