According to our (Global Info Research) latest study, the global Power Tools market size was valued at US\$ 28970 million in 2025 and is forecast to a readjusted size of US\$ 39370 million by 2032 with a CAGR of 4.5% during review period.

A power tool is a tool that is actuated by an additional power source and mechanism other than the solely manual labor used with hand tools. The most common types of power tools use electric motors. Internal combustion engines and compressed air are also commonly used. Other power sources include steam engines, direct burning of fuels and propellants, or even natural power sources like wind or moving water. Tools directly driven by animal power are not generally considered power tools. Power tools are used in industry, in construction, in the garden, for housework tasks such as cooking, cleaning, and around the house for purposes of driving (fasteners), drilling, cutting, shaping, sanding, grinding, routing, polishing, painting, heating and more. Power tools are classified as either stationary or portable, where portable means hand-held. Portable power tools have obvious advantages in mobility. Stationary power tools however often have advantages in speed and accuracy, and some stationary power tools can produce objects that cannot be made in any other way. Stationary power tools for metalworking are usually called machine tools. The term machine tool is not usually applied to stationary power tools for woodworking, although such usage is occasionally heard, and in some cases, such as drill presses and bench grinders, exactly the same tool is used for both woodworking and metalworking.

Global key players of Power Tools include Stanley Black & Decker, TTI, Bosch, Makita, Hilti, etc. The top five players hold a share about 72%. North America is the world's largest market for Power Tools and holds a share about 33%, followed by Europe and Asia-Pacific, with share about 30% and 26%, separately. In terms of product type,
