Abstracts

Power transformers are defined as static devices comprising two or more windings; they use electromagnetic induction to transform an alternating current or voltage system into a different system of current or voltage, which has been stepped up or stepped down for the transmission of electric power. Power generating utilities find it highly cost-effective to generate electric power at low voltage levels.

Scope of the Report:

This report focuses on the Power Transformers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia-Pacific was the largest market for power transformers in 2017, and is expected to dominate the market till 2023. Europe is the second largest market, partly due to the replacement of aging infrastructure activities going on in the region.
