## Abstracts

According to our (Global Info Research) latest study, the global Powered Paragliding market size was valued at USD 908.5 million in 2023 and is forecast to a readjusted size of USD 1399.2 million by 2030 with a CAGR of 6.4% during review period.

Powered paragliding, also known as paramotoring or PPG, is a form of ultralight aviation where the pilot wears a back-mounted motor (a paramotor) which provides enough thrust to take off using a paraglider. It can be launched in still air, and on level ground, by the pilot alone — no assistance is required.

In many countries, including the United States, powered paragliding is minimally regulated and requires no licence. The ability to fly both low and slow safely, the 'open' feel, the minimal equipment and maintenance costs, and the portability are claimed to be this type of flying's greatest merits.
