Abstracts

According to our (Global Info Research) latest study, the global Powered Roof Supports market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Powered roof support is one of the basic machines of the whole longwall complex that determines the safety and efficiency level of the mining process. The roof support working in hazardous conditions of mining tremors should be adapted to absorb dynamic loads. In the next years Polish mining industry will try to design solutions that allow limiting the number of personnel responsible for the control of machinery in the longwall. Decreasing the number of failures of machinery and equipment connected to technological process of coal mining is equally important as increasing the safety level of staff during mining (Lu et al., 2011). Control system of the powered roof support takes place according to specific stages.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
