Abstracts

According to our (Global Info Research) latest study, the global Powersports Helmet market size was valued at US\$ 2876 million in 2025 and is forecast to a readjusted size of US\$ 4243 million by 2032 with a CAGR of 5.7% during review period.

Powersports Helmet is a type of helmet (protective headgear) used by motorcycle riders. The primary goal of a helmet is safety to protect the rider's head during impact, thus preventing or reducing head injury and saving the rider's life. Some helmets provide additional conveniences, such as ventilation, face shields, ear protection, intercom etc. In 2025, global Powersports Helmet production reached approximately 23,292 k units, with an average global market price of around 120 US\$/ Unit. The production capacity of Powersports Helmet reaches 29,100 k units, and the industry's gross profit margin is approximately between 30% and 50%.

The demand for powersports helmets continues to grow, primarily driven by increasingly stringent global traffic safety regulations, heightened rider safety awareness, the popularization of motorcycle culture, and personalized consumption trends.

Governments around the world are generally implementing mandatory helmet policies and continuously upgrading product certification standards, prompting consumers to replace their helmets with compliant ones that offer higher levels of protection. At the same time, with the increase in sales of medium and large displacement motorcycles and the shift of riding from a commuting tool to a leisure sport, users are placing higher demands on helmets in terms of comfort, aerodynamic design, noise reduction performance, smart integration, and appearance.
