Abstracts

The brushless DC motor (BLDC) offers high dynamics and torque density in minimal space. The platform enables implementation of an intelligent drive strategy, variable torque scaling through adaptation of the active length and several configuration options for the electronics. The powertrain actuator is designed for harsh ambient conditions (depends on load profile/application), e.g. high NVH (noise, vibration, and harshness) and demanding vibration and tightness requirements.

According to our (Global Info Research) latest study, the global Powertrain Actuator market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
