Abstracts

The global Powertrain market size is expected to reach \$ 3566 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Powertrain Testing is undergoing radical change, driven by the challenges that global society faces today. The need for reduced dependence on fossil fuels and improved carbon footprints is driving advances in the technologies used in all vehicles. This in turn has a direct impact on approaches to testing of powertrain components and systems.

There are three major areas of powertrain test: Hardware-in-the-loop and Component cells test sub-systems of the Powertrain and normally include simulation of other components that are absent from the test. These are generally focused on the development of hardware systems such as engine/prime-mover/transmission control systems.

Full-Powertrain cells provide a test of the full Powertrain solution, often in combination with a Robot Driver and real-world simulation tools.

In-Vehicle tests allow the full powertrain to be tested in the vehicle, normally with a Robot Driver and again will often use real-world simulation technologies.

Market competition is intense. AKKA Technologies, Ricardo, FEV, ThyssenKrupp and Horiba, etc. are the leaders of the industry, with about 34% market shares.

North America region is the largest supplier of powertrain testing, with a revenue market share nearly 30%. Europe is the second largest supplier of powertrain testing, enjoying

revenue market share nearly 28%.
