## Abstracts

According to our (Global Info Research) latest study, the global PP Plastic Honeycomb Panel market size was valued at US\$ 493 million in 2025 and is forecast to a readjusted size of US\$ 676 million by 2032 with a CAGR of 4.5% during review period.

In 2025, global production of PP plastic honeycomb panels reached 15.46 million square meters, with an average selling price of US\$31 per square meter. PP plastic honeycomb panels are hollow three-layer or double-layer composite honeycomb structure panels made from polypropylene (PP). They feature high specific strength, water and chemical resistance, corrosion resistance, recyclability, sound absorption/buffering, and low weight. They are often used to replace traditional lightweight materials such as plywood, balsa wood, and foam core materials, and their applications have expanded from traditional packaging to multiple fields including automotive, rail/transportation, marine and yachting, building interiors, industrial equipment, logistics packaging, outdoor displays, and new energy. The upstream of the industry chain mainly includes PP resin, extruded PP film, PET nonwoven fabric, PP barrier film, CFRT/continuous fiber reinforced thermoplastic sheet, FRP/metal face material, adhesives/hot pressing composite equipment, and honeycomb continuous molding equipment; the midstream is honeycomb core material manufacturers; and the downstream includes automotive interior and exterior trim and flooring parts, logistics turnover boxes/collateral boxes, truck/RV/refrigerated truck bodies, building panels, ship and yacht interior components, and photovoltaic and wind power supporting panels. Gross profit margins range from approximately 20% to 45%.
