Abstracts

Polypropylene (PP), also known as polypropene, is a thermoplastic polymer used in a wide variety of applications. It is an addition polymer made via chain-growth polymerization from the monomer propylene. Polypropylene can be produced in a variety of structures giving rise to applications including packaging and labeling, textiles, plastic parts and reusable containers of various types, laboratory equipment, automotive components, and medical devices. It is a white, mechanically rugged material, and is resistant to many chemical solvents, bases and acids.

Scope of the Report:

This report focuses on the PP (Polypropylene) Nonwoven Fabrics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The outpouring demand for disposable consumer products is a key driving factor for the global market. Increasing consumer preference towards PP nonwoven fabrics over other nonwoven fabrics owing to its superior quality and advantages in manufacturing hygiene products is the key factor expected to boost the demand over the forecast years. In addition, increasing environmental concerns coupled with stringent regulations from government bodies such as EPA is expected to hamper the market growth over the forecast period. APAC leads the market, followed by Europe. However, Middle East and Africa is expected to be the fastest growing market for the forecasted period in terms of demand.

The worldwide market for PP (Polypropylene) Nonwoven Fabrics is expected to grow at a CAGR of roughly xx% over the next five years, will reach 32000 million US\$ in 2023,
