## Abstracts

The global PP Recycled Pellet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PP recycled pellet refers to small plastic pellets made from recycled polypropylene (PP) material. PP is a thermoplastic polymer widely used in various industries such as packaging, automotive, construction, and textiles. The production of PP recycled pellets starts with collecting and sorting post-consumer or post-industrial waste materials made of PP. The waste materials are then cleaned, shredded, and melted down into a liquid state. The molten PP is extruded through a die to form small cylindrical shapes, which are then cooled and cut into small pellets.

This report studies the global PP Recycled Pellet production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for PP Recycled Pellet, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
