## Abstracts

The global PP Shrink Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PP (Polypropylene) shrink film is a type of plastic film that is commonly used for packaging and wrapping applications. It is made from polypropylene, a thermoplastic polymer known for its high clarity, strength, and heat-shrinkable properties.

When heated, the PP shrink film shrinks tightly around the product or package, conforming to its shape and providing secure and tamper-evident protection. The shrinkage process occurs due to the film's ability to retract when exposed to heat, typically using hot air or heat tunnels.

This report studies the global PP Shrink Film production, demand, key manufacturers, and key regions.
