## Abstracts

According to our (Global Info Research) latest study, the global PPLN Waveguide Crystal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The PPLN(Periodically Polarized Lithium Niobate) waveguide crystal is a special nonlinear optical crystal, through periodic polarization inversion to achieve nonlinear optical effects such as second harmonic generation, optical mixing and optical modulation .

In the lattice structure of the PPLN waveguide crystal, the polarization electric field reversal forms a periodic polarization, which can effectively change the dispersion characteristics of light in the crystal and realize the multiplication or mixing of optical frequency. The PPLN waveguide crystal is an important nonlinear optical material. Through its special polarization structure and waveguide effect, the frequency conversion and modulation of optical signals can be realized, and it has a wide application prospect.
