Abstracts

According to our (Global Info Research) latest study, the global PPO/HIPS Alloy market size was valued at US\$ 360 million in 2025 and is forecast to a readjusted size of US\$ 526 million by 2032 with a CAGR of 5.8% during review period.

PPO/HIPS alloy is an engineering plastic alloy modified by blending polyphenylene oxide (PPO) and high-impact polystyrene (HIPS). It overcomes the drawbacks of pure PPO, such as high melt viscosity and difficult processing, while maintaining high heat resistance, high mechanical strength, dimensional stability, and excellent electrical insulation properties. It is widely used in electronics, automotive parts, and home appliances.

The core upstream raw materials are PPO and HIPS resins. PPO provides heat resistance and dimensional stability, while HIPS improves processing flowability and toughness. In addition, phosphorus-based flame retardants (such as RDP/BDP), compatibilizers, and glass fiber are also key auxiliary raw materials. The core midstream process is melt extrusion blending. The key technology lies in controlling the microphase distribution of PPO and HIPS by adding specific block copolymers as compatibilizers.

Global sales in 2025 are estimated at approximately 80,000 tons, with an average selling price of US\$4,379 per ton. The industry gross profit margin is around 30%.
