Abstracts

The global PP/PE Slip Masterbatch market size is expected to reach $ 2776 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

In 2025, the global production volume of PP/PE Slip Masterbatch reached approximately 850 thousand tons, with an average selling price of USD 1,850 per ton, production capacity of approximately 1.2 million tons, and a gross margin of 22%.

PP/PE Slip Masterbatch is a functional plastic masterbatch produced by using polypropylene (PP) or polyethylene (PE) as carrier resins and incorporating slip agents such as oleamide and erucamide through melt blending and extrusion pelletizing processes. It reduces the coefficient of friction on polyolefin film surfaces, improves film opening performance, processing efficiency, and surface slip properties. It is mainly used in polyethylene and polypropylene film products, including food packaging films, agricultural films, pharmaceutical packaging films, and industrial packaging films.

The upstream of the PP/PE Slip Masterbatch industry mainly includes suppliers of polypropylene (PP), polyethylene (PE) base resins, and functional additives such as oleamide and erucamide. The midstream consists of slip masterbatch manufacturers, which produce different grades of slip masterbatch products through formulation design, compounding modification, and extrusion pelletizing processes. The downstream mainly includes plastic film manufacturers, with products widely used in food packaging, agriculture, pharmaceutical packaging, consumer goods packaging, and industrial packaging applications.
