The global PPS High Temperature Filter Felt market size is expected to reach \$ 1077 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

In 2025, global PPS High Temperature Filter Felt production reached approximately 33.23 million sqm, with an average global market price of around USD19.50 per sqm. The gross profit margin of major manufacturers ranges from 23.00% to 31.00%. In 2025, global production capacity reached approximately 43.72 million sqm.

PPS High Temperature Filter Felt is a needle-punched filtration medium manufactured from polyphenylene sulfide fibers for continuous operation in high-temperature and chemically aggressive environments. It offers excellent resistance to acids, hydrolysis and oxidation while maintaining dimensional stability and filtration efficiency. The product is widely used in industrial baghouse dust collectors handling flue gas from coal-fired power plants, waste incineration, cement production, steelmaking and chemical processing. It is designed specifically for high-temperature filtration rather than general industrial textiles.

The upstream industry includes PPS resin, PPS staple fibers, additives, scrims and auxiliary textile materials. Midstream consists of fiber opening, blending, needle punching, heat setting, coating, membrane lamination and quality inspection. Downstream applications include industrial dust collection systems used in power generation, cement, metallurgy, waste incineration, chemicals and other high-temperature emission control sectors. Market demand is supported by stricter environmental regulations, industrial emission upgrades and replacement of filtration media.

This report studies the global PPS High Temperature Filter Felt production, demand, key manufacturers, and key regions.
