Abstracts

The global PPS Modified Plastics market size is expected to reach $ 1578 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

PPS modified plastics are high-performance composite materials obtained by twin-screw extrusion blending and granulation, using pure polyphenylene sulfide (PPS) resin as the base material and adding additives such as glass fiber, carbon fiber, mineral fillers, toughening agents, lubricants, and antioxidants. Modification methods can achieve functional adjustments such as reinforcement, toughening, flame retardancy, conductivity, wear resistance, and low warpage. The material possesses excellent heat resistance, chemical corrosion resistance, dimensional stability, flame retardancy, and good mechanical strength, and is widely used in electronics, automotive parts, precision machinery, new energy, and chemical equipment, meeting the injection molding requirements of harsh conditions such as high temperature, strong corrosion, and precision assembly.
