Abstracts

The global PPS Thermal Pipe market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PPS thermal pipe is a thermal pipe made of polyphenylene sulfide (PPS) material. PPS is a high-performance engineering plastic with good thermal conductivity and high temperature resistance. PPS thermally conductive pipes are usually made in the form of composite materials, that is, thermally conductive fillers, such as aluminum oxide, silicon oxide, etc., are added to the PPS matrix. These fillers have high thermal conductivity and can improve the thermal conductivity of PPS thermal pipes. PPS thermal conductive pipes have good thermal conductivity, high temperature resistance (can withstand high temperatures above 200°C), chemical corrosion resistance and mechanical strength. They also have a low thermal expansion coefficient and excellent electrical insulation properties. PPS thermally conductive pipes are widely used in the field of electronic appliances, such as the cooling systems of electronic products such as computers, mobile phones, and LED lights. Because PPS thermal conductive pipes have excellent thermal conductivity and high temperature resistance, they can effectively conduct heat to the radiator or cooling fan, thereby maintaining the normal operating temperature of electronic equipment and improving the reliability and life of the equipment.

This report studies the global PPS Thermal Pipe production, demand, key manufacturers, and key regions.
