According to our (Global Info Research) latest study, the global Pradefovir Mesylate Tablets market size was valued at US\$ 25.72 million in 2025 and is forecast to a readjusted size of US\$ 104 million by 2032 with a CAGR of 6.5% during review period.

Pradefovir Mesylate Tablets are a novel liver-targeted nucleoside reverse transcriptase inhibitor indicated for the treatment of chronic hepatitis B. It exerts potent and sustained antiviral activity by inhibiting hepatitis B virus DNA replication following liver-specific metabolic activation. Designed with liver-targeted prodrug technology, this agent significantly increases drug concentration in the liver while reducing systemic exposure, thereby improving renal and skeletal safety issues associated with long-term use of traditional nucleoside analogs. It provides a safer first-line therapeutic option for patients with renal insufficiency or renal injury risk, featuring strong targeting, favorable safety profile, and good clinical compliance. In 2025, global Pradefovir Mesylate Tablets production reached approximately 2.1 million bottles.

Pradefovir Mesylate Tablets is a domestically innovated liver-targeted antiviral drug for chronic hepatitis B. With its core advantages of liver targeting and high safety profile in terms of renal and bone toxicity, it has established differentiated competitiveness in the long-term treatment of chronic hepatitis B. The drug has been included in the national medical insurance catalogue, which significantly lowers the financial barrier for patients and drives rapid growth in its clinical penetration. In the market, it is precisely positioned for patients at risk of renal injury caused by traditional nucleoside analogues and elderly populations. Supported by medical insurance policies, clinical guideline recommendations and academic evidence, it is gradually gaining share in first-line treatment. The overall market is in a transitional stage from introduction to growth

phase. Its future growth momentum will mainly come from deeper insurance coverage, increased physician awareness, expanded indications and overseas market potential, while it also faces multiple challenges such as competition from existing first-line drugs, pricing pressure from generics and continuous innovation in new drug research and development.
