According to our (Global Info Research) latest study, the global Pre-engineered Building market size was valued at USD 31020 million in 2023 and is forecast to a readjusted size of USD 54770 million by 2030 with a CAGR of 8.5% during review period.

Pre-engineered building (PEB) is a building enclosure system, which consists of a particular building structure along with roof and wall cladding. The PEB structural systems consist of rigid frames that are fabricated from plate steel. These rigid frames contain roof beams and columns that are field bolted together, thus they can span large distances without intermediate supporting columns. Various advantages offered by pre-engineered building include reduced construction time, lower cost, flexibility of expansion, large clear spans, quality control, low maintenance, energy-efficient roofing & wall systems, architectural versatility, and single source responsibility.

The Global Info Research report includes an overview of the development of the Pre-engineered Building industry chain, the market status of Warehouses & industrial (Single-story, Multi-storey), Commercial (Single-story, Multi-storey), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Pre-engineered Building.
