Pre-press engraving system is a machine or software used in the printing industry to create high-quality printing plates or cylinders. The system typically involves a computer-aided design (CAD) software that enables easy and accurate creation and manipulation of graphics, text, and images to be printed. The graphics can be digitally etched onto the plate using lasers or other advanced imaging technologies, resulting in precise and consistent impressions on the printing materials. The use of pre-press engraving system reduces the need for manual labor and produces a more efficient, cost-effective and high-quality final product.
