## **Abstracts**

Precast construction is a type of construction, wherein pre cast (any material that is in its final shape before being positioned at its original location) construction structures are used. Concrete, and steel in some cases, is generally used in precast construction. These structures are manufactured beforehand in a plant, which is located away from the actual construction site. These precast construction components are then transported and later assembled mechanically with the help of anchor bolts at the actual construction site. High early strength cement is cured with the help of steam curing and casts can be formed within a duration of 24 hours. Buildings can be constructed faster and at a much cheaper rates through precast construction. Components used for precast construction are generally standardized. This helps in providing better quality to structures as compared to site-cast concrete, as they are manufactured in a controlled condition. Precast construction components are more durable and hence can also be reused later. Controlled conditions while manufacturing precast allows better control of surface finishes. Compared to site-cast, precast construction components can be erected faster and are affected less by adverse weather conditions, making it comparatively safer.

Precast components in construction are used for residential as well as nonresidential complexes. Among nonresidential complexes, these components are useful in the construction of stadiums, parking lots of shopping complexes, bridges, etc.

### **SCOPE OF THE REPORT:**

This report focuses on the Precast Construction in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The use of precast construction components in the non-residential sector is expected to rise in the near future. The precast construction market is expected to expand at a rapid pace due to the increasing demand for new construction across the globe. During the recent times, there has been an increase in the investments in public and the private infrastructure sectors in major economies. This is expected to drive the market for precast construction in the next few years.

North America and Europe follow Asia Pacific in the precast construction market. The precast construction market in Asia Pacific has been expanding significantly due to the increase in construction activities in mature and developed countries such as China, Russia, Japan, India, and South Africa.

The worldwide market for Precast Construction is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
