According to our (Global Info Research) latest study, the global Precession Flowmeter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The precession flowmeter is a flowmeter used to measure fluids such as liquids, steam and gases.

The flow rate is measured based on the principle that the vortex frequency generated when the fluid passes through an obstruction (such as a rod-shaped obstacle) is proportional to the flow rate.

The precession flowmeter combines next-level high accuracy, short front and rear straight pipe sections with the solid reliability of a vortex flowmeter, providing reliable and outstanding performance in liquid, gas and steam measurement.
