According to our (Global Info Research) latest study, the global Precipitated Hydrated Silica market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The precipitated hydrated silica is a white amorphous powder, insoluble in water and acid, soluble in caustic soda and hydrofluoric acid. The production of precipitated silica requires multiple processes such as precipitation, filtration, and drying, and is precipitated by chemical reaction between sodium silicate and an inorganic acid (usually sulfuric acid). The control of the reaction in the production process of the precipitated silica has high requirements. The quality of the raw materials, the concentration of each component, the temperature, the reaction time, the pH value, the stirring speed and other factors will affect the specific surface area and structure of the produced silica. , dispersion and concentration of silanol groups, etc., each variable requires precise control and adjustment.
