Abstracts

The global Precipitated Silica for Feed Additives market size is expected to reach \$ 183 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, the global production of precipitated silica for feed additives reached 83,000 tons, with an average selling price of US\$1,520 per ton. Precipitated silica for feed additives is a synthetic amorphous silica produced using primary raw materials such as sodium silicate and sulfuric acid, through a process involving liquid-phase precipitation, filtration, washing, drying, and pulverization/granulation. It is primarily utilized in fields such as animal nutrition premixes, vitamin premixes, mineral premixes, amino acid additives, acidifiers, mold inhibitors, antioxidants, flavorings, colorants, veterinary drug premixes, the solidification of liquid additives, and milk replacers. The upstream sector comprises silica sand, soda ash, sodium silicate, sulfuric acid, energy sources, and packaging materials; the midstream sector consists of precipitated silica manufacturers; and the downstream sector includes companies involved in feed additives, premixes, vitamins, acidifiers, veterinary drugs, and animal nutrition. Gross margins range from approximately 25% to 40%.
