According to our (Global Info Research) latest study, the global Precision Cleaning for Semiconductor Equipment Parts market size was valued at US\$ 1039 million in 2025 and is forecast to a readjusted size of US\$ 1610 million by 2032 with a CAGR of 6.5% during review period.

Semiconductor chamber parts cleaning lagged behind the 'Ultra-Clean Revolution' which is central in discussing all other semiconductor process inputs (i.e., gases, chemicals and silicon). Every other semiconductor process input has a Certificate of Analysis (COA) even new parts. However, recycled chamber part cleanliness varies significantly in particle levels and atomic level contamination. This is partly because standard practice used the tools themselves to perform the final cleaning of the parts. Verifying cleanliness targets was achieved by using many test wafers, expensive wafer metrology and wasted production time. Cleaning is a process to remove contaminants such as particles and ionic impurities of equipment parts generated during customers' process.

Global key players of Precision Cleaning for Semiconductor Equipment Parts include UCT (Ultra Clean Holdings, Inc), Mitsubishi Chemical (Cleanpart), KoMiCo, Shih Her Technology, Pentagon Technologies, etc. The top five players hold a share over 45%. Asia-Pacific is the largest market, and has a share about 80%, followed by North America and Europe with share 12% and 7%, separately. In terms of application, Semiconductor Etching Equipment Parts has a share about 42 percent.

The global market for semiconductor was estimated at US\$ 526.8 billion in the year 2023, is projected to US\$ 780.7 billion by 2030. IC Manufacturing is the process used to

manufacture semiconductor devices, typically integrated circuits (ICs) such as computer processors, microcontrollers, and memory chips (such as NAND flash and DRAM). According to our research, the global semiconductor manufacturing (wafer fabrication) market is projected to grow from US\$ 251.7 billion in 2023 to US\$ 506.5 billion by 2030, at a Compound Annual Growth Rate (CAGR) of 40.49% during the forecast period. This will drive rapid growth of global cleaning and coating for semiconductor parts.
