Copper-coated steel strip is a product made by coating a layer of copper on the surface of a steel plate after a series of treatment processes. This process can cover the surface of the steel strip with a uniform and dense copper layer, thereby enhancing the corrosion resistance and electrical conductivity of the steel strip, and also improves the appearance quality of the steel strip, making it more decorative and practical. Copper-coated steel strip combines the high strength, excellent elasticity, high thermal resistance and high magnetic permeability of steel with the good electrical conductivity and corrosion resistance of copper, and is an excellent bimetallic composite material.
