According to our latest research, the global Precision Investment Casting Service market size will reach USD 417 million in 2031, growing at a CAGR of 5.4% over the analysis period.

Precision Investment Casting Service is a high-precision metal parts manufacturing service based on investment casting process.

Precision investment casting service refers to the use of investment casting process to make a fusible primary model (usually a wax model), and coat its surface with multiple layers of refractory materials to form a shell. After the shell is hardened and dried, the wax model is melted and removed to obtain a cavity shell corresponding to the shape of the wax model, and then it is roasted at high temperature, and then molten metal is poured into the shell. After the metal cools and solidifies, the shell is broken to obtain an advanced near-net-shape molding service for metal parts. This service can produce precision and complex castings of various metal materials. The castings have high dimensional accuracy, good surface finish, and are close to the final shape and size of the parts. They can be used without processing or with only a small amount of processing.
