Abstracts

Precision stamping special steel belongs to the category of special steel, which usually refers to special steel materials that have been precision cold rolled and heat treated to achieve specific properties and used for precision stamping of parts. Precision stamping special steel has special requirements on the chemical composition, mechanical properties, microstructure, dimensional accuracy and surface quality of the material. If the material is required to have a high spheroidization rate, a specific heat treatment method is required to make the internal structure of the material present a spherical carburized structure, so as to satisfy the requirement that the downstream fine blanking process does not produce tearing strips and burrs. Guarantee the safety performance, quality, yield and stability of components.
