Abstracts

TRB is made up of four basic components-the cup, the cone, the cage, and the rollers. The cup, also called the outer ring, is the largest part of the assembly, and its inner surface is tapered to conform to the angle of the roller assembly. The cone forms the inner race of the bearing, while the cage keeps the rollers equally distributed around the cup and cone. The rollers, cage, and cone are joined together to form a cone assembly. When joined with a cup, the cone assembly and cup form a TRB set. The rolling elements transmit the physical load or force from the moving parts to the stationary support. Under normal operating conditions, the races and rolling elements carry the load, while the cage spaces and retains the rollers. TRBs provide combined radial and thrust load capability.
